2007 **QTL-ALL** (Quantitative Trait Locus - Association and Linkage Library) version 1.0 is a tool for quantitative trait locus linkage analysis using nuclear family data. It combines comprehensive data checking and preparation procedures with a large set of QTL-mapping statistics implemented in C. Statistics are available for population samples and for various types of selected samples. Many previously published statistics are included, as well as some new score statistic variants. It is available at <http://watson.hgen.pitt.edu/register/>.

2007 **SNP Caller** is a set of routines for making genotype calls from raw intensity data using mixture models for disomic or trisomic data. It is available at <http://watson.hgen.pitt.edu/register/>.
