Graduate School of Public Health
Department of Human Genetics
APPLICATIONS IN PUBLIC HEALTH GENETICS & GENOMICS
HUGEN 2053
Thursday 9:30-11:30am
Room 2121C Public Health
Credit Hours: 2.0
Fall Semester 2019

Instructors
Andrea Durst, MS, DrPH, LCGC
Room: 3129 Public Health
Phone: 412-624-3190 (office) 502-974-3014 (cell)
E-Mail: adurst@pitt.edu
Office Hours: By appointment

Candy Kammerer, PhD
Room: 3120 Public Health
Phone: 412-624-7265 (work)
E-Mail: cmk3@pitt.edu
Office hours: Before and after class and by appointment

Course Description
This graduate level course builds on the basic components of public health genetics and genomics and provides students with the opportunity to discuss and apply these concepts to public health. The goal of this course is for students to apply knowledge and skills learned across public health disciplines, especially the use of genetic principles, in a public health practice setting. Using current issues in public health genetics, students will also demonstrate mastery of essential competencies through data analysis, and oral and written communication.

Pre-requisites: HUGEN 2049 (may be taken concurrently); BIOST 2041 or BIOST 2011 or equivalent

Learning Objectives
After completion of this course, the student will be able to:

1. Analyze data to answer questions important to the field of public health genetics and genomics.
2. Communicate genetic and genomic principles to the general public as part of current public health initiatives.
3. Communicate both orally and in writing how public health genetics and genomics can be incorporated into public health.
4. Discuss the precision medicine initiative and its impact on the public, healthcare, and the field of public health.
5. Assess the ethics of the application of genetic technologies to public health.
6. Apply skills in statistics, epidemiology, and health policy to determine the impact of public health genetics initiatives.
7. Evaluate how genetic principles/technologies apply to diagnosis, screening, and interventions for disease prevention and health promotion programs.

These learning objectives will be measured via student participation in in-class discussions and during the written and oral presentation projects throughout the semester.
Required Text
None Required

Additional articles and handouts will be posted on CourseWeb or handed out in class.

Teaching Philosophy
The professors for this course emphasize active participation, critical thinking, and applied learning in helping students to develop the skills that they have learned in public health genetics and genomics as well as other areas of public health. Public health genetics and genomics is a new and quickly developing field, and our goal is to prepare students to be at the forefront of this field in the future. Because we all have different perspectives and have experienced different events, all questions and viewpoints are encouraged and respected in the classroom and within groups.

Academic Integrity:
All students are expected to adhere to the school’s standards of academic honesty. Cheating/plagiarism will not be tolerated. The Graduate School of Public Health’s policy on academic integrity, which is based on the University policy, is available online in the Pitt Public Health Academic Handbook [www.publichealth.pitt.edu/home/academics/academic-requirements](http://www.publichealth.pitt.edu/home/academics/academic-requirements). The policy includes obligations for faculty and students, procedures for adjudicating violations, and other critical information. Please take the time to read this policy.

Plagiarism
University of Pittsburgh policy: “Integrity of the academic process requires that credit be given where credit is due. Accordingly, it is unethical to present as one's own work the ideas, representations, words of another, or to permit another to present one's own work without customary and proper acknowledgement of sources.

A student has an obligation to exhibit honesty and to respect the ethical standards of the profession in carrying out his or her academic assignments. Without limiting the application of this principle, a student may be found to have violated this obligation if he or she:*  
- Presents as one's own, for academic evaluation, the ideas, representations, or words of another person or persons without customary and proper acknowledgment of sources.  
- Submits the work of another person in a manner which represents the work to be one's own.”  
Source: [http://www.bc.pitt.edu/policies/policy/02/02-03-02.html](http://www.bc.pitt.edu/policies/policy/02/02-03-02.html)

Therefore, you must clearly indicate which thoughts are yours and which thoughts belong to others by citing your sources. If you are uncertain, please contact the instructor. Plagiarism detection software will be used in this course. If plagiarism is detected, you will automatically receive a grade of zero for that assignment.

Accommodation for Students with Disabilities:
If you have a disability for which you are or may be requesting an accommodation, you are encouraged to contact both your instructor and Disability Resources and Services, 140 William Pitt Union, 412-648-7890 as early as possible in the term.

A comprehensive description of the services of that office can be obtained at [www.drs.pitt.edu](http://www.drs.pitt.edu).
Sexual Misconduct, Required Reporting and Title IX Statement

The University is committed to combatting sexual misconduct. As a result, you should know that University faculty and staff members are required to report any instances of sexual misconduct, including harassment and sexual violence, to the University’s Title IX office so that the victim may be provided appropriate resources and support options. What this means is that as your professor, I am required to report any incidents of sexual misconduct that are directly reported to me, or of which I am somehow made aware.

There are two important exceptions to this requirement about which you should be aware:

A list of the designated University employees who, as counselors and medical professionals, do not have this reporting responsibility and can maintain confidentiality, can be found here: www.titleix.pitt.edu/report/confidentiality

An important exception to the reporting requirement exists for academic work. Disclosures about sexual misconduct that are shared as part of an academic project, classroom discussion, or course assignment, are not required to be disclosed to the University’s Title IX office.

If you are the victim of sexual misconduct, Pitt encourages you to reach out to these resources:
• Title IX Office: 412-648-7860
• SHARE @ the University Counseling Center: 412-648-7930 (8:30 A.M. TO 5 P.M. M-F) and 412-648-7856 (AFTER BUSINESS HOURS)

If you have a safety concern, please contact the University of Pittsburgh Police, 412-624-2121.

Other reporting information is available here: www.titleix.pitt.edu/report

Statement from the Department of Gender, Sexuality, and Women's Studies
[This statement was developed by Katie Pope, Title IX Coordinator, in conjunction with GSWS instructors.]

Diversity Statement:

The University of Pittsburgh Graduate School of Public Health considers the diversity of its students, faculty, and staff to be a strength and critical to its educational mission. Pitt Public Health is committed to creating and fostering inclusive learning environments that value human dignity and equity. Every member of our community is expected to be respectful of the individual perspectives, experiences, behaviors, worldviews, and backgrounds of others. While intellectual disagreement may be constructive, no derogatory statements, or demeaning or discriminatory behavior will be permitted.

If you feel uncomfortable or would like to discuss a situation, please contact any of the following:

• the course instructor;
• the Pitt Public Health Associate Dean for Diversity at 412-624-3506 or nam137@pitt.edu;

the University’s Office of Diversity and Inclusion at 412-648-7860
Grading
The grading for this course is based on four main projects completed over the course of the semester. Your grade for the course is based upon your work as follows:

<table>
<thead>
<tr>
<th>Project Title</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Local Health Department Experience</td>
<td>50</td>
</tr>
<tr>
<td>Preliminary Data Analysis</td>
<td>180</td>
</tr>
<tr>
<td>Health Literacy Project</td>
<td>70</td>
</tr>
<tr>
<td>Public Health Genetics Initiative Case Study</td>
<td>75</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>375</strong></td>
</tr>
</tbody>
</table>

Students may help each other to achieve the best work you are capable of producing. Working with one another to achieve mastery will help you learn the material with greater ease and enjoyment.

Grading scale:

- 94-100% = A
- 90-93% = A-
- 87-89% = B+
- 84-86% = B
- 80-83% = B-
- 70-79% = C
- Below 70% = F

Late Work Policy
Work that is turned in late without prior approval from the instructor(s) will result in 5% of the points for the assignment being deducted for each day (or fraction thereof) the assignment is late. Students with extenuating or emergency situations should contact the instructor(s) as soon as possible, and preferably before the due date to make arrangements for assignments.

Attendance
Attendance is not taken for this class; however, ongoing and active participation in class discussions and projects is important for student learning, and students are encouraged to attend all class sessions unless excused by the course instructor(s).

Projects (Please see included chart and class schedule for all project due dates)

Project #1: Public Health Meeting Experience (50 points)

Learning Objective #3: Communicate both orally and in writing how public health genetics and genomics can be incorporated into public health.

Learning Objective #7: Evaluate how genetic principles/technologies apply to diagnosis, screening, and interventions for disease prevention and health promotion programs.

The goal of this project is to help students understand current issues in local public health and explore how genetics and genomics may be important to already existing programs. For this project, students will identify and attend a public meeting related to public health. A list of meetings in Pittsburgh has been provided, but students may also identify a public meeting not on the list.
Students are required to observe one public meeting and write a 4-5 page paper that includes a summary of the meeting, the student’s thoughts/comments on the meeting (was it run well, what were some interesting components/interactions, etc.), how their skill sets and/or genomics/genetics may play a role or be important to topics covered during the meeting, and how this experience will impact their future career as a public health professional.

Project #2: Preliminary Data Analysis

Learning Objective #1: Analyze data to answer questions important to the field of public health genetics and genomics.

Learning Objective #3: Communicate both orally and in writing how public health genetics and genomics can be incorporated into public health.

Learning Objective #6: Apply skills in statistics, epidemiology, and health policy to determine the impact of public health genetics initiatives.

Students will independently obtain access to a data set for the completion of this project. Students may choose to use data that they will be using for the completion of their public health essay and/or Master’s thesis project, a publicly available data set, or a data set made available to them via a work position or practicum.

Part 1: Data Description, Demographics and Research Question Presentation (40 points)
After a data set is obtained, students will give a 15 minute presentation that contains the following:
- A description of the data set and the population from which it was obtained
- A description of how the data were collected
- Demographic information from the data set, including descriptive statistics
- Limitations of the data set and/or data collection method
- Presentation slides should be emailed to instructors prior to class
- A minimum of three research questions that can be answered with the chosen data set.

Part 2: Preliminary Data Analysis Presentation (40 points)
Students will give a 15 minute presentation on a date assigned by the instructors on their preliminary data analysis. Slides for this presentation should be sent to the instructors by 5pm on the day prior to the presentations.

Part 3: Preliminary Data Analysis Paper (100 points)
Students will perform statistical analyses on their selected data set to answer their finalized research questions. A brief introduction to the project, the description of the data set, methods, results, and conclusions will be written up in a preliminary data analysis document with references and submitted to the course instructors.

Project #3: Health Literacy Project

Learning Objective #2: Communicate genetic and genomic principles to the general public as part of current public health initiatives.
Learning Objective #3: Communicate both orally and in writing how public health genetics and genomics can be incorporated into public health.

For this project, students will work in groups to assess a written resource related to public health genetics and genomics that was developed for the general population.

Part 1: (40 points)
In their groups, students will re-write their assigned pieces taking into consideration the health and genetic literacy of the general population.

Part 2: (30 points)
Each group will give a 10 minute presentation on their process for editing the written resource and the changes that were made to their assigned written resource.

Project #4: Public Health Genetics Initiative Case Study (75 points)

Learning Objective #1: Analyze data to answer questions important to the field of public health genetics and genomics.

Learning Objective #3: Communicate both orally and in writing how public health genetics and genomics can be incorporated into public health.

Learning Objective #4: Discuss the precision medicine initiative and its impact on the public, healthcare, and the field of public health.

Learning Objective #5: Assess the ethics of the application of genetic technologies to public health.

Learning Objective #6: Apply skills in statistics, epidemiology, and health policy to determine the impact of public health genetics initiatives.

Learning Objective #7: Evaluate how genetic principles/technologies apply to diagnosis, screening, and interventions for disease prevention and health promotion programs.

Students will be given a scenario that outlines a new public health genetics testing and/or screening initiative that is being proposed for implementation. Students will assess the initiative and write up this assessment and their opinion on whether the initiative should move forward (with references). The written document will include the following (Maximum 10 pages):

- A brief introduction and background of the initiative (maximum 2 pages)
- A brief discussion of the genetic information important to the initiative (maximum 2 pages)
- The sensitivity, specificity, positive predictive value, and negative predictive value of the proposed testing/screening method
- An estimate of the cost of implementing this initiative with a comparison to the cost of doing nothing
- A discussion of barriers to implementation and the alternatives to implementation
- A discussion of the social, ethical and legal issues with implementation
- A recommendation on whether the initiative should move forward.
Students will be asked to turn in two sections of the case study prior to the final due date to receive feedback and discuss in class. These will be the sensitivity, specificity, PPV, NPV analysis (Number 3 in the instructions) and part of the cost analysis (Numbers 4a-d in the instructions). Students will receive 5 points for Number 3 and 15 points for 4a-d (these count as part of the 75 total points for the project). Students who turn in these parts early can earn back up to half of any deducted points by changing their analyses in the final document.

Assigned Reading List (Reading List May Change)

8/29/19: Intro/Syllabus Review and Discussion of Student Projects/Preliminary Data Analysis

No assigned readings

9/5/19: Plan for a Healthier Allegheny and Sensitivity/Sensitivity/PPV/NPV

2019 Allegheny County Strategic Plan

*Students should have this text from their Epidemiology Core Course. Students without access to this text book should see a course instructor for a copy.

9/12/19: Advanced Health/Genetic Literacy and Social Justice/Social Costs/Disparities

Complete the following online CDC training module prior to class (you will need to do a free registration):
https://www.train.org/cdctrain/training_plan/2304

Two Guides that may be helpful for the Health Literacy Project (not required reading for class):

9/19/19:  Precision Medicine Overview and All of Us PA Program Assessment

Will Precision Medicine Improve Public Health (Webinar)  
[https://www.youtube.com/watch?v=3qiTfpCiT9o](https://www.youtube.com/watch?v=3qiTfpCiT9o)

National Institutes of Health: All of Us Research Program.  [https://allofus.nih.gov/](https://allofus.nih.gov/)  
Explore the “About” section of this website to learn more about the All of Us Precision Medicine Initiative

9/26/19:  ACMG Actionable Gene List

Please listen to the following podcast: New Estimates of the Penetrance of Hemochromatosis: Time to re-think screening?  [https://media.nature.com/original/nature-assets/multimedia/podcast/gim/gim_11012017.mp3](https://media.nature.com/original/nature-assets/multimedia/podcast/gim/gim_11012017.mp3)

10/3/19:  Implementation Science and Review of Case Study Sections
TBD

10/10/19: Data Description, Demographics and Research Questions Student Presentations
No readings

10/17/19: Data Description, Demographics and Research Questions Student Presentations
No readings

10/24/19: Return of Results and Population Screening

10/31/19: Health Literacy Group Presentations
No Readings

11/7/19: Salary Negotiation and In-Class Work Section
No Readings, bring your preliminary data analysis project questions

11/14/19: Direct-to-Consumer Genetic Testing and Examples

TBD

11/21/19: Preliminary Data Analysis Presentations
No Readings

11/28/19: NO CLASS: Thanksgiving

12/5/19: Preliminary Data Analysis Project Presentations
No Readings

12/12/19: Regional Genetics Network Project Mind Mapping & Discussion of AGHD Experiences

Please review the slides on Canvas

The new RFA for the Regional Genetics Networks is expected in November, and a link to this will be provided for you to review before class. We will be developing a plan for implementation based on the goals outlined in the new RFA.
