Role Description

Patient-Centered Outcomes Fellowship - Novartis Oncology

Employment Period: 1 year from start date

Location: East Hanover, NJ

Job Description:

The Novartis Global Value and Access Patient Centered Outcomes (PCO) team is hosting a one-year, full-time post-graduate fellowship to work on patient-centered outcomes projects and research studies across oncology and rare disease therapeutics. The fellow will report to the Executive Director of PCO and interface with clinical development, medical affairs, commercial and other functional groups.

The fellow will receive training and mentorship in the following areas:

- Understanding the Patient Centered Outcomes area in the context of drug development
- Creation and implementation of patient centered outcomes strategies
- Honing research skills with regards selection, adaptation and/or development of clinical outcomes assessments appropriate for understanding patient-reported treatment benefits
- Writing and analyzing data for publications

Major Focus:

This fellowship will provide a qualified graduate student with the opportunity to participate in the execution of patient centered outcomes activities across the global oncology and rare diseases franchises at Novartis Oncology. This will also include opportunities for collaboration with a number of external experts in these therapeutic areas.
Activities may include:

- Researching the concepts important to patients to inform patient-centered outcomes strategies for oncology assets
- Assessing PRO and other Clinical Outcomes Assessments for new indications and determine the suitability of existing PRO measures
- Partnering with different functions of the Novartis organization to develop PCO strategies for individual programs
- Developing PCO sections of protocols and analyses plans
- Synthesizing research and presenting to cross-functional teams
- Learning patient-centered outcomes analyses techniques for new and existing PCO measures
- Contributing to advancing the patient-centric culture in Novartis though supporting the conduct of training sessions to advance the PCO knowledge of Novartis associates

Qualifications:

- Completed graduate degree (Masters, PharmD or PhD) preferred, or in process of doctoral program in psychology, public health, health services research, epidemiology, life science or outcomes-research related area
- Interest in patient-centered outcomes and drug development
- Proven collaborative team member skills
- Project Management Skills
- Ability to research, assess and synthesize health policy and health outcomes literature
- Excellent communication skills (oral and written)

YOU MUST EMAIL YOUR APPLICATION TO BE CONSIDERED FOR THIS ROLE:

Send your resume and cover letter to Susan Vallow at susan.vallow@novartis.com for consideration by May 13, 2021. We are looking for a candidate to start in June 2021.
